

Animal Waste Storage Facility

Eilers Brothers, LLP

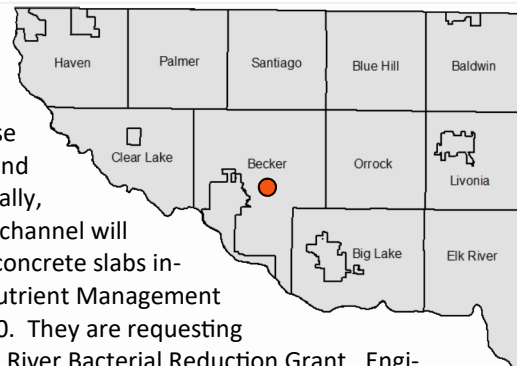

Elk River Bacterial
Reduction Grant

Project Summary

Eilers Brothers Limited Partnership have applied for cost-sharing assistance with the construction of an animal waste storage facility and supporting practices. These practices include a 120' x 248' x 6' deep High Density Polyethylene (HDPE) lined pond to store runoff from the feedlot to prevent it from entering the Elk River. Additionally, diversions will be constructed to divert clean water away from the feedlot; a lined channel will direct feedlot runoff to a pumping station to be pumped into the pond; roofs and concrete slabs installed for feed storage and ramps. Per requirements, an NRCS Comprehensive Nutrient Management Plan will be followed for manure application. The project cost estimate is \$350,000. They are requesting \$9,425.57 in cost share funds from the SWCD. Funds came from the CWF 2014 Elk River Bacterial Reduction Grant. Engineering assistance funds were also used for the project.

They will also be receiving USDA-EQIP financial assistance.

Installation of Liner - July 2017

Completed Construction
